

Tutorial 5: Data Bind mounts

- Make a new directory you want to share:
- `mkdir ./data`
- `docker run -it --rm -v $PWD/data:/data
my-jupyter bash`
- `/data` now mounted inside image
- Can use this in clever ways!

Tutorial 5: Data

Bind mounts

- `docker run -it --rm -v $PWD/data:/data my-jupyter bash`
- Full path is always required for both elements.
- Can have multiple -v commands for more mounts
