

# Glossary

Term	Meaning
<b>Docker</b>	Framework for building and sharing images and running containers
<b>Image</b>	Frozen snapshot of a file system
<b>Container</b>	Instance of an image with processes running in it
<b>Dockerfile</b>	Recipe for making images
<b>DockerHub</b>	Shared repository of images

# Compared to Virtual Machines

- Dramatically faster startup
  - Can package single command as container start
- Much lighter
- Less isolated from host machine
