

# ★ Tutorial 3: Dockerfiles ★

- Add these line to end of your Dockerfile:

```
RUN pip3 install jupyter ipython numpy
```

- Build again:

```
docker build -t my-image .
```

- Run a container:

```
docker run -it --rm my-jupyter ipython
```

# ★ Tutorial 3: Dockerfiles ★

- Lines executed sequentially
- Each line creates a new layer in file system
- -t identifies image with tag
