

Tutorial 6: Jupyter

- `docker run --rm -it -p 8888 my-jupyter`
jupyter notebook --port=8888 --ip=0.0.0.0
--allow-root
- Green italics = command run inside container
 - Could have just put “bash” then typed all this

Docker for HPC

- Pure docker generally unsuitable for HPC
 - Requires root
- Other solutions being developed in HPC sector
 - Singularity (LBL)
 - Shifter (NERSC)
- A little immature but moving fairly quickly
