

Communication

- By default containers can connect out to world, access internet etc.
But outside cannot connect inwards.
- Must expose ports with -p flag if want to connect inwards
 - e.g. to run databases, servers, notebooks

Tutorial 6: Jupyter

- `docker run --rm -it -p 8888 my-jupyter
jupyter notebook --port=8888 --ip=0.0.0.0
--allow-root`
- Open the URL in your browser - need to change 0.0.0.0 to 127.0.0.1
- Task: Combine these commands with the data mounting we looked at earlier to save notebook and results to host disk.
