

# Tutorial 4: Lifetimes

- While other container is running, new terminal:
- **`docker exec -it container_number bash`**
- Run a new command in a running container

# Data Storage

- By default container is isolated from your disk
- Can ad-hoc copy things from containers
- Three Options for more automatic solutions
  - Temporary storage — “tmpfs”
  - Docker-managed storage — “volumes”
  - Mounted host directories — “bind mounts”
